CardioComm Solutions, Inc. To Release Windows-Compatible Global ECG Monitoring System (GEMS™) Software Version 4.0

*Also To Distribute New GEMSTrak™ AF Event Loop Recorders,
Meeting GEMS Standard*

Toronto, Canada - - November 29, 2010 - - [CardioComm Solutions, Inc.](#) (TSX-V: EKG) announced today that they are completing a major rewrite of their Global ECG Management Software (GEMS™), and will have the Windows 7 forward-compatible GEMS 4.0 version available by the end of Q2 2011. It will be available to users in North America and Europe at that time, with selected additional availability to other countries thereafter. The new GEMS 4.0 software offering will encompass CardioComm's full line of arrhythmia monitoring modules, will have multiple report sending options, and easy-to-use, customizable work flow features. With multi-language capabilities, GEMS 4.0 will allow CardioComm to access new international markets.

Etienne Grima, CEO of CardioComm said "This means physicians, medical monitoring services, and hospitals can easily install GEMS on their updated computers, and track and store comprehensive ECGs and patient information, including enrollments, symptoms, follow-ups, and more. Additionally, we'll be distributing the new GEMSTrak Event Loop Recorders that meet the new GEMS standard, and customers with old recorders that are still operational (any brand) may send them in for a rebate on the same number of GEMSTrak ELRs. The GEMSTrak ELRs are FDA, CE and Health Canada approved devices."

The availability of the GEMS 4.0 customizable workflow options means customers can design their own, simplified workflows. Technicians may set up the most efficient and easy-to-use ECG processes to guide users through a specific set of predetermined steps.

CardioComm customers who already have a valid GEMS service and support agreement will be able to receive a free software upgrade to GEMS 4.0. A beta version of GEMS 4.0 is available now for demonstration purposes.

More information

CardioComm also plans a GEMS 5.0 SaaS-based service that will extend the firm's C4 (CardioComm Coordinating Centre) service into home monitoring. This move will mark CardioComm's entry into the consumer ECG and 'biosign' monitoring market.

For more information on GEMS 4.0 or the GEMSTrak™ AF Event Loop Recorder, contact Mona Palfreyman, Director of Customer Support & Quality Assurance, mona@cardiocommsolutions.com, 250-744-1822, X 223.
